

Scaling Paid Growth Across 20+ Early-Stage Accounts

How a structured, intent-driven paid strategy delivered a **25% portfolio-wide effectiveness lift** — and a **300% ROI increase** for a flagship D2C brand — on budgets ranging from \$300 to \$3,000/day.

The Core Problem

Portfolio clients were defaulting to broad match keywords and single-campaign structures that blended audiences — burning budget on clicks that never converted to demos, signups, or qualified pipeline.

The Fix

Rebuilt every campaign structure around **audience intent** rather than product categories. Separated buyer types into independent structures with distinct messaging, landing pages, and conversion events — then layered in AI-powered bidding once conversion volume was ready.

What Changed — and Why It Worked

Intent-Based Campaign Architecture

Rebuilt structures around three funnel stages — prospecting, mid-funnel, and retargeting — replacing category-based campaigns that mixed audiences and muddled optimization signals.

Audience Separation

Distinct buyer types (buyers vs. sellers, SMB vs. enterprise, schools vs. parents) were split into independent campaign structures with tailored creative, copy, and conversion tracking per segment.

AI Bidding — Done Right

Implemented Target CPA and Maximize Conversions strategies only after validating conversion-volume readiness — preventing the premature automation that typically stalls early-stage accounts.

Attribution & Tracking Hygiene

Trained client marketing teams on GA4 attribution setup and GTM conversion tracking, ensuring clean data flowed into bidding models and reporting from day one.

The Repeatable Playbook

Audit & Restructure

Map intent; separate campaign types

Conversion Readiness

Fix tracking; validate GA4 & GTM

AI Bidding Activation

Enable Target CPA or Max Conversions

Scale & Standardize

Replicate across portfolio; train teams

The framework built during this engagement became the team's standard early-stage playbook — a repeatable system that removes guesswork and lets AI bidding do its job on a clean, structured foundation.
